Advanced Poly-Packaging, Inc.

Why Choose Advanced Poly-Packaging?

Because we are Solutions-Driven! Solutions don't come from individuals. They're formulated by teams. That's what you get at Advanced Poly-Packaging – teams of packaging professionals who can discuss your application and send bag samples, quotes, product evaluations or other tools you may need. We are proud to introduce you to our products and show you how they will increase your production – and your bottom line!

Advanced Poly-Packaging is not only learning about innovation – we're creating it through continued research & development investments. We're also investing in new technology that allow our customers to conduct more business online.

The company was founded in 1979 by Tony Baker and remains family-owned. Our headquarters are located in Akron, Ohio and all of our products are made in the USA!

Do you want to see our products in action? Visit our website at www.advancedpoly.com for videos as well as links to our social media channels.

Disclaimer: The information provided in the following pages is for promotional purposes. Specifications in this literature are subject to change without notice. Products listed may not be suitable to package your products; therefore, we can provide samples of our products for your testing and evaluation to determine if they meet your requirements. We recommend samples of your products to determine suitability, proposed equipment and options, production speeds, final package size/configuration and estimated production speeds. Performance guarantees are available for machines and bags but vary from product to product. Please request a guarantee that is tied to a specific quote from Advanced Poly. Performance guarantees are subject to change without notice..

ST-1000 Automatic Towel Inspection & Bagging System

7,500 shop towels per hour.* One operator.

Actually, the operator is only needed if your application includes visual inspection of the product before it is bagged. It's easy to see how the Automatic Towel Inspection & Bagging System will save money!

Product is pulled from a dual hopper/conveyor and dropped to a conveyor, where it can be inspected, if necessary. When the product reaches the desired (programmed) weight, the conveyor advanced the product to a waiting, open bag on the T-1000 Advanced Poly-Bagger. The bag is sealed and conveyed to a shipping container or otherwise collected.

Why weigh the product instead of counting it? Weighing is faster and usually more accurate than counting and it's what our customers told us they want. You can actually have it either way with the ST-1000 since weight can be converted from count. Once the weight is established, you can simply let the machine operate and walk away. The system is driven by the T-1000 Advanced Poly-Bagger™ and its reputation for speed, reliability, versatility and simplicity!

* based on continuous operation for 60 minutes; other products or non-continuous operation impact the amount of product bagged per hour (ex: 6,000 bar towels per hour).

Special Features

- 5.7" Color Touch Screen Operator Panel/PLC
- Programmable optic sensor for scrap detection
- Quick-change parts design & off-the-shelf standardized parts
- Teflon-shield for extended Teflon life
